**Assessment of Requirement for Precise Geodetic Data.**

The elimination of the requirement for "precise geodetic locations" of targets in the new concept of the PNID's has created a void in the definition and evaluation of the relevancy and significance of geodetic accuracies for current and future U.S. weapons systems. An assessment of these requirements is needed to provide a basis for DD/I decisions on priorities for allocation of collection resources. Such a review will also provide a frame of reference to [redacted] in its updating of the Soviet requirement for geodetic accuracies against U.S. weapons facilities

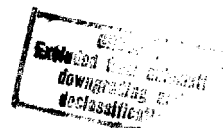

Chief, [redacted]

SAC - to review weapons systems requirements for geodetic accuracies.
